AN ANNOTATED BIBLIOGRAPHY OF THE UNITED STATES MARINE CORPS

CONCEPT OF CLOSE AIR SUPPORT

Compiled by

JAMES S. SANTELLI

Introduction

The list which follows consists of publications dealing in whole or in part with the development and employment of close air support by the Marine Corps. The scope of the bibliography covers a period of time which begins with the first real combat employment of the technique of close air support in Nicaragua in 1927 through the war in Vietnam.

To obtain the greatest possible value to the largest number of researchers and writers, broad criteria for selection of items to be included have been utilized. Inclusion of any given title does not, therefore, constitute Marine Corps acceptance or endorsement of an author's views, conclusions, or indeed, complete historical accuracy. By the same token, the annotation supplied is in the nature of description of the contents of books and articles rather than a critical evaluation.

The abbreviation "CAS" denotes the phrase "close air support." The annotation "notes" indicates that the publication is documented as to research sources; "bibliog." indicates that a bibliography of research materials is appended. The inclusion of illustrations is indicated by "illus."
